vmware esxi 5.5 license key If you are using VMware ESXi 5.5, the activation of VMWare- installed Windows 10 is not possible. You cannot use Setup to activate your Windows 10 on VMware ESXi 5.5 because it will not find the product key that was generated to unlock it. To get around this issue, you can perform a clean install of Windows 10 without Setup and then activate Windows 10 on VMware with your old product-key so that you can review or change settings before upgrading to Windows 10 Pro for Workstations (Product Key: WNP2N-E4GWK-DQT6J). It is recommended that this be done. If you have an actual Windows 10 Pro license key on a USB drive, you can simply insert that into the Windows 10 ISO file on the DVD and start the installation of Windows 10 Professional with your existing product key on VMware ESXi 5.5.

With version 5, VMware is supporting more workloads with an amazing upgrade of preinstalled applications for storage and networking features in vCenter Server Appliance (VCSA) 6.0 Update 2a. The VCSA 6.0 Update 2a also supports the latest components of vSphere, vCenter Server, NSX for VMs and Horizon View. Current VMware customers can run their vSphere installations on an upgraded VCSA 6.0 Update 2a and will benefit with enhanced features for network switching and storage. On 23 April 2011, VMware started shipping its new virtualization platform with the release of vSphere 4.1:

VMware also offers operating system customization through a number of products including:

  One of the most popular VMware software products is VMware Workstation, which can be used as a free trial version to test the performance of the full installed product. VMware Workstation can run multiple operating systems concurrently on one host computer. Support for Windows NT virtual machines was removed in VMware Fusion version 7 and later. The VMware ESX Server is a multi-user, x64-based server operating system, and features live migration and storage virtualisation capabilities. It is the software component that provides the foundation to support the VMware Virtual Infrastructure. The current release of vSphere 4.1 is based on ESXi 5, which is based on the same code as ESX 4.1 Update 1, which has been released as a free upgrade to users of both ESX and ESXi since August 2010.
